PROFILE

Computer Engineering graduate focused on cybersecurity and security engineering, with independently developed open-source projects spanning network reconnaissance, packet analysis, threat detection, log analysis, and security-response workflows. Builds security tooling in Python and Rust, with hands-on experience in network protocols, detection rules, REST APIs, automated testing, Docker, and CI workflows.

TECHNICAL SKILLS

- Security Engineering: Threat Detection, Log Analysis, Network Security, Packet Analysis, Security Automation, Reconnaissance, Vulnerability Assessment, Incident-Response Workflows, Audit Controls
- Networking: TCP/IP, PCAP, Ethernet, IPv4/IPv6, ARP, TCP/UDP, Flow Tracking, TCP Reassembly, Port Scanning, Banner Grabbing
- Security Detection: Brute-Force Detection, SQL Injection Detection, XSS Detection, Path Traversal/LFI Detection, Port-Scan Detection, SYN-Flood Detection, ARP-Spoof Detection, Anomaly Detection
- Programming: Python, Rust, Bash, TypeScript
- Engineering: FastAPI, Flask, REST APIs, WebSockets, SQLite, Pydantic, pytest, GitHub Actions, Docker, Cargo, Git/GitHub
- Security Tooling: Scapy, Nmap concepts, Bandit, pip-audit, Wireshark concepts

SECURITY ENGINEERING AND OPEN-SOURCE PROJECTS

LogSentinel - Apache Log Analyzer and Attack Detection - Python, FastAPI, SQLite, WebSocket, Docker, pytest, GitHub Actions

- Built an Apache log detection service with streamed parsing and rule-based detection for brute force, SQL injection, XSS, and path traversal/LFI.
- Implemented percent-decoding and per-IP historical analysis to improve detection of encoded attack payloads and repeated activity.
- Integrated SQLite persistence, REST APIs, WebSocket alert streaming, CLI tooling, traffic simulation, and a monitoring dashboard.
- Added automated testing and GitHub Actions CI across Python 3.10, 3.11, and 3.12, including an end-to-end CLI execution check.

LogSentinel Approval and Audit Service - Python, FastAPI, Pydantic, pytest, HTTPX, Docker

- Engineered an approval-gated security response service separating detection/policy decisions from human authorization.
- Implemented approval creation, retrieval, approve/deny workflows, actor and reason tracking, and audit records for security actions.
- Designed fail-closed behavior so containment actions do not execute when the approval service is unavailable.
- Added validation and state-transition protection, including prevention of already-decided approvals from being re-decided.

NDAP - Network Detection and Analysis Platform - Rust, Cargo Workspace, PCAP, TCP/IP, axum, tokio

- Built a modular Rust network detection platform spanning packet capture, protocol decoding, flow tracking, detection, intelligence interfaces, CLI, and API components; implemented PCAP parsing and Ethernet, IPv4/IPv6, ARP, TCP, and UDP decoding from network wire formats.
- Implemented 5-tuple flow tracking and TCP reassembly with basic out-of-order buffering, and developed detection rules for port scans, SYN floods, and ARP spoofing operating on real packet streams.

Sentinel - Async Reconnaissance Framework - Python, Pydantic, Typer, Async Networking

- Built an asynchronous reconnaissance framework with global concurrency control, rate limiting, structured result models, and streaming CLI output; maintained as an independent open-source security project.

Mini Scanner - Python, TCP, ThreadPoolExecutor, Flask, pytest

- Built a modular TCP-connect scanner supporting concurrent scanning, hostname resolution, banner grabbing, configurable timeouts, and JSON output; reused the same engine across CLI and Flask interfaces.
- Added authorization confirmation, port-count limits, timeout controls, IP-based rate limiting, automated tests, and type-checking tooling.

PacketSnifferAnalyzer - Python, Scapy, FastAPI, WebSockets, PyQt6, pytest, Bandit, pip-audit

- Developing a network packet analysis platform with a shared capture core, protocol parsing, traffic analysis, CLI, GUI, and dashboard interfaces, structured using Clean and Hexagonal Architecture.
- Configured automated testing, coverage, static analysis, type checking, security scanning, and dependency auditing. (In-development / alpha)

CERTIFICATIONS

Google Cybersecurity Professional Certificate | Mastercard Cybersecurity Job Simulation | Oracle Certified Professional - OCI Data Science | OCI 2025 Certified AI Foundations Associate | OCI 2025 Certified Foundations Associate

EDUCATION

Bachelor of Engineering in Computer Engineering

Sinhgad College of Engineering, Savitribai Phule Pune University | 2019 - 2025 | CGPA: 7.54/10 (A Grade)
